BLOODHOUNDS
Are Unable to Get Trail of Burglars Who Looted Bridgeport Store.

Sheriff Ross F. Stout's bloodhounds, in charge of Deputy Sheriff Laco Wolfe, secured the neighborhood Sunday in an effort to find trace of burglars who broke into N. L. Fitzhugh's general store at Bridgeport some time during the preceding night and made away with about \$50 worth of merchandise and a small quantity of change that had been left in a cash till. The dogs were unable to pick up a scent owing to a change in the weather which caused frozen ground to thaw.

The burglars effected an entrance by breaking a front window. The town postoffice is situated in the store but the burglars, evidently fearing Uncle Sam's activities, did not molest anything in it. The stolen goods consisted largely of men's clothing.

CLUB FIVE

Will Meet West Virginia Business College Team Tuesday Evening.

A basketball game which should prove interesting from a local standpoint will be played Tuesday evening at 8 o'clock on the St. Mary's gymnasium floor when the St. Mary's Club five will meet the West Virginia Business College team.

These two teams played several games last season and the business college boys won all of them, but in so doing they substituted some of the leading players of the city for some of their own men. In the game Tuesday night the business college five will use the following well known players: Crummitt and Fletcher at forwards, Schutte or Cork at center and McMillan and Agnew at guards. These boys all are regular students at the business college and should prove to be one of the fastest teams in the state this winter.

The St. Mary's Club will use the same lineup which it played against the Weston team. As both teams are about equally matched in weight a good, fast, clean game is expected. Later in the season these two teams will play for the city championship.

REED

Receives Very Complimentary Mention by Randolph Enterprise at Elkins.

The Randolph Enterprise published at Elkins mentions Stuart F. Reed as follows:

One of the greatest orators in the state, if not the United States is Stuart F. Reed, secretary of state, of West Virginia, who delivered the most eloquent address ever heard in Elkins, last Sunday afternoon at the opera house before a magnificent audience of the best people of our city. Ex-Senator Reed spoke for over an hour and held the large crowd spell-bound with the witchery of his word-painting. It was an effort that deserves more than a passing notice and if Mr. Reed can paint his political platform in as brilliant colors as his masterly address at the Elks memorial, there should be no doubt about his nomination and election to Congress next year and perhaps some other time as governor or United States senator. Born and reared in our neighboring county of Barbour, he secured a first class education by working his way through the university, and then, locating at Clarksburg, served as editor of the Telegram, one of the greatest newspapers of the state, then state senator and secretary of state and will be a candidate for Congress from the Third district.

The Tone of the Edison is the Tone of the Artist

The New Edison Diamond Disc Phonograph has no SOUNDING box built into the cabinet; the ROUND amplifying horn is not attached to the cabinet; they do not need SOUNDING boxes as they RE-CREATE the TONE of the artist; the purpose of the amplifying horn is to increase and concentrate the tone waves that have been recorded in the record in the same manner that a reflector increases and concentrates the light waves; did you ever hear of a SQUARE reflector? Certainly not. A square reflector would CONFUSE the light waves just as a SQUARE amplifying horn CONFUSES tone waves; the ROUND reflector like the ROUND amplifying horn increases and concentrates the sound waves into a bright volume in greater purity than the original. Which do you prefer?

THE NEW EDISON DIAMOND DISC phonograph has a permanent Diamond point. Mr. Edison has always believed that the reproduction of the vibrations recorded should be the same at the end of the record as at the beginning. If a STEEL needle is used that MUST be renewed for each record, it is very evident that the NEEDLE has worn away on the FIRST record played. Then the reproduction of the vibrations are not the same at any two places on the record. And the shavings that have worn off the needle are deposited IN THE RECORD; do you think that reproduction of a record filled with STEEL SHAVINGS will be the same as the record was when made? If the record and the steel needle were RIGHT when made, why not keep them in the same condition? With the EDISON, the DIAMOND point fits the groove of the RECORD snugly, at the beginning, at the ending and for 3,000 reproductions; the record is so hard that it does not wear; the reproducer does not drag across the record, it is suspended from the amplifying horn by a SILK CORD; this absolutely isolates the recorded vibrations from the amplifying compartment and PREVENTS the usual grinding tin pan, CABINET made tones so common in TALKING machines. The Thomas A. Edison Co. employ the artists to sing in comparison with their records on the Diamond Disc Phonograph, because the Edison CABINET does not sing.
